

How to share jobs on Facebook Community Pages

Within your personal or business Facebook account first ensure you are a member of the local community group in which you wish to share a job.

In the Care Friends app, find the job you wish to share and press 'share'.

3 Your phone's native sharing function will appear giving you several sharing options. Look down past all those options and you will see a 'copy' option. Press copy. Although it looks like the app has done nothing, your phone has copied the link to the clipboard.

Within your Facebook account find the group you wish to place the job advert on such as 'Wilston, Windsor, Grange & Newmarket Community Group' or' Rockhampton Jobs etc'. Start a new post on that community page and paste that link into the post.

iPhone: tap in the post and select "paste". Android: long-press in the post and select "paste".

It is recommended to add additional text at the top to introduce the role or company.

Hey all. I work for ABC care as a carer and I love my job and clients. If you're looking for a meaningful job as well, have a look here. It's not only rewarding work, but ABC care also cares about its employees. Highly recommend it!
